

Hawkeye Tracking SMART Phone GPS Tracking

Integration Capability

For increasing capabilities, it is readily possible to integrate mapping and tracking data to other software or business applications. This could in the future provide you with a very efficient transfer of data, forms and task information to-and-from field workers and head office. This can provide:

- Comparison and checking of routes against planned or assumed routes
- Pushing planned destination GPS locations from head office to the PDA.
- Tracking of route versus destinations
- Tracking and Exception reporting on a range of elements, such as
 - When arrived at all destinations;
 - Destinations missed
 - Idle time
 - Device off time
 - Speed and routes taken;

Hawkeye Integration - Benefits

- Eliminates or reduces need for field workers to return to base for information updates
- Increases on-the-road time of field resources
- Allows tracking against appointment/destination points to ensure compliance with plans
- Controls and reduces employee non-value added time
- Allows 'clock-on/off remotely, with a location and time stamp.
- Flexible reporting promotes focusing on unusual/out of control events

Mapping users – expansion

Should wider access be needed to the mapping displays, a web-based version is available
